AM

Prepared by: CrimsonLogic Pte Ltd	For: Singapore Customs (SC)	Release Date 18/11/2021	Ver 4.1	Reference TRADENET	Document Id. TDS41-MDS-XML-IPTDEC-M
--------------------------------------	--------------------------------	----------------------------	------------	-----------------------	--

1. INTRODUCTION

This specification provides the definition of the Customs Declaration message to be used in Extensible Markup Language (XML) between trading partners involved in Administration, commerce and transport.

This document shall be used as a baseline for the interface software design and shall be agreed upon by representatives from the Singapore Customs (SC) and CrimsonLogic Pte Ltd.

2. SCOPE

The document shall provide the following principles and details for the following:

- criteria for passing information from Traders, Freight Forwarders, Cargo Agents and Shipping Agents to SC and CAs (if applicable).
- message format.

The segments, composite data elements, data elements and codes used in this document are based on the respective directories in the UN/CEFACT. Refer to references 3 to 12 for more details.

AM

Prepared by: CrimsonLogic Pte Ltd	For: Singapore Customs (SC)	Release Date 18/11/2021	Ver 4.1	Reference TRADENET	Document Id. TDS41-MDS-XML-IPTDEC-M
--------------------------------------	--------------------------------	----------------------------	------------	-----------------------	--

3. FIELD OF APPLICATION

The message specification provided in this document are intended for use for the exchange of information between the trading partners in international trade. This message may be applied for both national and international trade. It is based on universal practice and is not dependent on the type of business or industry.

3.1 Principles

This message incorporates the necessary transport, statistical, and declaration information. Provision has also been made for the inclusion of appropriate commercial information which may be accepted by the Issuing Authorities in lieu of supporting documentation.

The design principles adopted allow for referencing one or more commercial documents pertaining to the same declaration and for the grouping of document lines into a single customs item. A customs item consists of the grouping of those document lines having the same customs characteristics (eg. invoice number, Declaration Type etc). The message correspondingly permits the use of single or multi-packaging concepts and their identification to a customs item.
